

EE 605: Information Theory

Course Code	EE 605
Course Name	Information Theory
L-T-P-C	EE309: 3-0-0-3
Prerequisites	IC 210, EE 304 or equivalent or Consent of Teacher
Intended for	B.Tech 4th year and Research Students
Distribution	Elective
Approval	5th Senate (Oct 2013)

Course Contents

- Concept of information, Information measures: Hartley measure, Shannon Entropy. [3 hours]
- **Basic notions:** Entropy, joint and conditional entropy, relative entropy, mutual information, KL-distance, Jensen and Log-sum inequalities. [6 hours]
- **Source compression:** Asymptotic Equipartition Property (AEP) and its consequences for data- compression, types of codes, Kraft inequality, optimal codes and bounds of their lengths, Huffman codes and their optimality, Shannoncode, Arithmetic coding. [6 hours]
- **Channel coding:** the notion of channel capacity, discrete memory less channels, channel capacity computation for elementary DMC channels, symmetric channels, jointly typical sequences, data-processing and Fano's inequalities, channel coding theorem (achievability and converse), feedback capacity, source-channel separation theorem and joint source- channel coding: multimedia communications. [9 hours]
- **Differential entropy:** AEP for continuous variables, joint and conditional differential entropy, relative entropy and mutual information. [3 hours]
- **Gaussian channel:** Coding theorem for Gaussian channels, Band limited channels, parallel Gaussian channels, channels with colored Gaussian noise: water-filling argument. [9 hours]
- **Advanced topics:** Rate-distortion theory, Network coding, Introduction to Network Information Theory. [6 hours]
