
MA 550: Statistical Data Analysis

Course Code	MA 550
Course Name	Statistical Data Analysis
L-T-P-C	2-1-0-3
Prerequisites	MA 202 for undergraduate
Intended for	MS/ Ph.D., Undergraduate (3rd and 4th year)
Distribution	Elective
Approval	2nd Adhoc Senate (May 2012)

Course Contents

- **Exploratory analysis of time series:**

Introduction, examples, simple descriptive techniques, trend, seasonality, stochastic and deterministic approaches; numerical and experimental data sets; challenges in data analysis and data graphical representation, interpretation; statistical tests, significance and power of a test, choice of the critical region, constructing test statistics: the Fisher discriminant, mean and variance test, testing goodness-of-fit, chi2-test, p-values; stationary time series process (ARMA Processes). [12 Lectures]

- **Analysis of stochastic series:**

Model identification and non-stationary time series models; forecasting with classical regression models; Forecasting with autocorrelations; Forecasting with lagged dependent variable; Forecast error statistics and evaluation; singularity detection, spectral density function, the periodogram, spectral analysis, correlogram, wavelet cross-correlation, multi-resolution analysis, examples and applications. [12 Lectures]

- **Clustering data techniques:**

Principal component analysis; different techniques of data clustering. [6 Lectures]
