

CS 524: Computational Complexity Theory

Course Code: CS 524

Course Name: Computational Complexity Theory

L-T-P-C: 3-1-0-4

Prerequisites: CS-212, CS-304 or instructor's consent

Students intended for: M.Tech/Ph.D./B.Tech 3rd/4th year

Elective or Core: Elective

Mutual Exclusion: -

Approval: 59th BoA

Course Contents

- **Unit I:** Review: P, NP, coNP, reductions, completeness, Cook-Levin theorem, some NP-complete problems. [2 Lectures]
- **Unit II:** Diagonalization, time hierarchy theorems, Ladner's theorem, Relativization, limits of diagonalization (Baker-Gill-Solovay theorem) [5 Lectures]
- **Unit III:** Space complexity, Savitch's theorem, PSPACE-completeness and NL-completeness, Immerman-Szelepcse nyi theorem, Polynomial hierarchy. [7 Lectures]
- **Unit VI:** Boolean circuits: P/poly, Karp-Lipton Theorem, NC and AC, P-completeness. [5 Lectures]
- **Unit V:** Randomized computation: BPP, RP, coRP, ZPP, Sipser-Gacs theorem, Valiant-Vazirani theorem. [6 Lectures]
- **Unit VI:** Interactive Proofs: AM and MA, graph non-isomorphism, $IP = PSPACE$, zero-knowledge proofs. [7 Lectures]
- **Unit VII:** Probabilistically Checkable Proofs: PCP theorem, equivalence of two views of the PCP theorem (proof checking and inapproximability), hardness of approximation. [6 Lectures]
- **Unit VIII:** Circuit lower bounds: Hastad's switching lemma, Parity is not in AC0. [5 Lectures]
