

DS 402 : Matrix Computations for Data Science

Course Code : DS 402

Course Name : Matrix Computations for Data Science

L-T-P-C : 2-0-2-3

Intended for : Discipline core for B. Tech. Data Science and Engineering, Discipline elective for B. Tech. Computer Science and Engineering, Electrical Engineering, Free elective for other B. Tech. disciplines

Prerequisite : IC110-Engineering Mathematics, IC111-Linear Algebra

Mutual Exclusion:

Approval: 55th BoA

Course Contents

- **Basics:** Errors in numerical computations. Review matrices and transformations, Matrix and Vector Norms. (2 lectures)
- **Matrix factorizations:** Cholesky factorization, QR factorization, Householder reflectors and Givens rotations. LU factorization and Gaussian elimination. Numerical stability Pivoting strategies and solution of triangular and full systems by factorization. (5 lectures)
- **Eigenvalue problem:** Basic theory, Power method, bisection method, QR algorithm. Similarity reduction. (4 lectures)
- **Linear least squares problem:** Singular value decomposition, Moore-Penrose Pseudoinverse. Perturbation theory. Least square and normal equations. SVD and rank deficiency, Principal Component Analysis, Linear Discriminant Analysis. (6 lectures)
- **Iterative methods for linear systems:** Iterative methods for linear systems Iterative methods: Jacobi, Gauss-Seidel and SOR iterations. Kronecker product. Krylov subspace methods, conjugate gradient method, preconditioning. (5 lectures)
- **Sparse and banded linear systems:** Storage schemes for banded and sparse matrices, Sparse matrices and sparse solutions: approximate inverses, eigenvalues, incomplete factorization. Matrix regularization: matrix completion. (6 lectures)

Lab Exercises:

Lab would be conducted on a 2-hour weekly slot. Lab sessions would be conducted in tandem with the theory course so the topics for problems given in the lab are already initiated in the theory class.
